Clean And Green: A Landfill Full Of Life

Great care is taken during the operation to ensure that the landfill is odour-free and the surrounding environment is not polluted. Thanks to these measures, the marine ecosystems around Semakau Landfill continue to flourish and the mangroves of Pulau Semakau remain a haven for many rare species of plants and animals.

At present, the waters around Semakau Landfill are a refuge for marine life such as barracuda, trevally, Sea Bass and Milkfish. More than 80 species of birds, including endangered shorebirds such as the Great-billed Heron and Malaysian Plover have made Semakau Landfill their home.

The mangroves and mudflats along the western shore of Pulau Semakau harbour rare and unusual plants and animals such as the Api-Api Jambu tree, the Knobbly Sea Stars, anemones and their resident anemonefish. The preservation of this biodiversity makes Semakau Landfill a unique location where Singaporeans can discover nature while learning about the need to preserve the environment by reducing and recycling their waste.
