Retailers of Goods Regulated under the Energy Conservation Act (ECA)

Dear Sir/Madam

RAISING CONSUMER AWARENESS OF ENERGY EFFICIENT HOUSEHOLD APPLIANCES

Under the Energy Conservation Act (ECA), any regulated goods (i.e. air-conditioner, refrigerator, clothes dryer, television, and lamp) must be registered with the National Environment Agency (NEA), meet the prescribed Minimum Energy Performance Standards (MEPS), and be labelled with an Energy Label that conforms to NEA's requirements (if applicable) before it can be supplied in Singapore. The Energy Label helps consumers identify appliances that are more energy efficient, and MEPS prevents less energy efficient appliances from entering the market. In doing so, consumers avoid getting locked into the high energy consumption and costs of inefficient appliances.

2 In 2019, NEA updated the ECA to mandate the display of the Energy Label or tick rating information in all regulated goods related publicity materials (digital and non-digital). With more consumers making purchases through online platforms, NEA seeks the support of the industry stakeholders to include a short advisory (found in **Annex A**) on your online platforms displaying your products, reminding consumers to only purchase regulated goods that have been registered with NEA. The message can also be found on NEA's website. The message will also help direct consumers to relevant sections of NEA's website, if consumers are keen to gather more information.

3 Should you have queries, please reach out to NEA via the email NEA_energylabel@nea.gov.sg.

Yours faithfully
(Transmitted via email)

Suresh K
Director (Carbon Mitigation Division)

National Environment Agency

MELS/MEPS Advisory
Consumers must only purchase NEA-registered appliances found within NEA's Database of Registered Goods. We need the public's support to report any regulated goods that do not have the Energy Label or are not registered to NEA_energylabel@nea.gov.sg. Consumers are strongly encouraged to look out for Energy Labels, which help consumers identify more energy efficient appliances, when purchasing household air-conditioners, refrigerators, clothes dryers, televisions, or lamps, in any local physical shops or from online shopping platforms.
